

Spring 2024-
2025
ECON 205

Problem Set 4

- 1) If Y is a continuous random variable with mean μ and variance σ^2 , a and b are constants, prove the following:

a) $E(aY+b) = aE(Y)+b = a\mu+b$

b) $V(aY+b) = a^2V(Y) = a^2\sigma^2$

- 2) Mrs. Brown is pregnant and due in 100 days. Suppose that the probability density distribution function for having a child is approximately normal with mean 100 and standard deviation 8. Mrs. Brown has a business trip and will return in 85 days and have to go on another business trip in 107 days.

- a. What is the probability that the birth will occur before her second trip?
- b. What is the probability that the birth will occur after she returns from her first business trip?
- c. What is the probability that she will be here for the birth?

- 3) Scores on an examination are assumed to be normally distributed with mean 78 and variance 36.

- a) What is the probability that a person taking the examination scores higher than 72?
- b) Suppose that students scoring in the top 10% of this distribution are to receive an A grade. What is the minimum score a student must achieve to earn an A grade?
- c) What must be the cut-off point for passing the examination if the examiner wants only the top 28.1% of all scores to be passing?

d) Approximately what proportion of students have scores 5 or more points above the score that cuts off the lowest 25%?

e) If it is known that a student's score exceeds 72, what is the probability that his or her score exceeds 84?

- 4) Let X be a normally distributed random variable with mean 79. Suppose it is known that $P(79-a \leq X \leq 79+b) = 0.6463$.

It is given that $P(X \geq 79+b) = 2P(X \leq 79-a)$

- Calculate the shaded area.
- Find the value of b .

- 5) The density function of X is given by

$$f(x) = \begin{cases} ax + bx^2, & 0 \leq x \leq 1 \\ 0, & \text{elsewhere} \end{cases}$$

$E(X) = 1/9$. Find a and b .

- 6) The weekly repair cost, X , for a certain machine has a probability density function given by:

$$f(x) = \begin{cases} cx(1-x), & 0 \leq x \leq 1 \\ 0, & \text{otherwise} \end{cases}$$

with measurements in \$100.

- a. Find the value of c that makes this function a valid density function.
- b. Find the cumulative distribution function of X .
- c. What is the probability that repair costs will exceed \$75 during a week?
- d. What is the probability that the repair costs will exceed \$75 during a week given that they will exceed \$50?

- 7) Suppose X is a continuous random variable with density function:

$$f(x) = \begin{cases} \frac{1}{2} x^2 e^{-x}, & x \geq 0 \\ 0, & \text{otherwise} \end{cases}$$

Find the moment generation function.

- 8) The length of time required by students to complete a one-hour exam is a random variable with a density function given by

$$f(y) = \begin{cases} cy^2 + y, & 0 \leq y \leq 1 \\ 0, & \text{elsewhere} \end{cases}$$

- a) Find c .
- b) Find $F(y)$.
- c) Find the probability that a randomly selected student will finish in less than half an hour.

Table A.3 Standard Normal Curve Areas (cont.)

$\Phi(z) = P(Z \leq z)$
